

1

Mortality counts have been provided by Statistics Canada up to the highest possible age in single years. However, due to suspicious data points, all deaths at ages 110+ years have been combined in the HMD into a closed age-interval for calendar years 2011-2018. Note that because of the standard Kannisto smoothing at very high ages implemented in the standard HMD Methods Protocol, this has no impact on the period life tables.

2

Death counts for years 2017-2019 are preliminary.
